## REACH Statement

The purpose of this statement is to inform ET Enterprises Limited's customers and other interested parties of its position with regard to the REACH Regulation (EC 1907/2006, as amended), for the registration, evaluation, authorisation, and restriction of chemicals.

The REACH Regulation came into force on 1<sup>st</sup> June 2007 with the aim of ensuring that all chemicals with the potential to harm human health and the environment are fully evaluated and authorised for use.

REACH refers to chemicals in three classifications; substances, preparations and articles. The products manufactured and distributed by ET Enterprises Limited are defined by REACH as 'articles', whereby their shape, surface or design has a greater effect than their chemical composition. REACH distinguishes between articles with and without an intended release of substances, and applies only to those with an intended release. ET Enterprises Limited's product ranges are listed below, and none of the products in these ranges has an intended release of a substance. Consequently, there is no requirement to register any of our products.

- Photomultipliers
- Photomultiplier Accessories
- Photon Detection Systems

With regard to substances and preparations used in its products, ET Enterprises Limited is recognised as a downstream user. Consequently, the responsibility for registering these substances and preparations lies with the manufacturer or importer of the substances and preparations.

ET Enterprises Limited is committed to ensuring its compliance with the requirements of the REACH Regulation, including all future changes. This includes monitoring the substance candidate list published by the European Chemical Agency which can be found at the following location :- <http://www.echa.europa.eu/candidate-list-table>. ET Enterprises Limited will also ensure that its own product developments are considered with regard to REACH.
